MMR_0252 Roger Hord. Died 2011 South Wales. Australia

If anyone has a picture of Roger, please send to Indycop999@hotmail.com

The *Snake River Railroad Lumber Company* is an exquisite layout in Nn3. Roger Hord has built his L-shaped layout almost totally from srcatch - not surprising considering the commercial support of the scale he is working in. The track and turnouts are handlaid, many of the locomotives are scratch built, as are most of the rolling stock and structures.

The railroad is freelance, set in the US during the early years of the lumber trade. Track is code 40 soldered to PCB ties periodically. The loco fleet consists of two K-37 class, one C-16, two 2-truck shays, one 3-truck shay and the Galloping Goose.
